

COLT SILVER CORP.
LEADING THE CHARGE

FALL 2026

Colt Silver Lists on the TSX.V Under Symbol COLT Largest Land Holder in the Santa Lucia District

New Listing: On October 19, 2026 Colt Silver Corp. began trading on the TSX Venture Exchange under ticker symbol COLT. Spun out from Palamina Corp.

Dominant Land Position: Now stands as the single largest landholder in the historic Santa Lucia Mining District ("SLMD") in Puno, southeastern Peru.

Four Silver Copper Projects in SLMD: Galena (Flagship), Sora, Volcano, and Esperanza assembled systematically since 2017 through staking and consolidation.

Flagship Galena Silver Copper Project: Located at the intersection of a northwest-trending porphyry copper belt and a northeast-trending, carbonate-hosted replacement deposit (CRD) belt. A 2,500m inaugural drilling program is scheduled for Fall 2026.

COMPELLING VALUATION RELATIVE TO ITS PEERS IN THE SANTA LUCIA DISTRICT

DRILL TESTING THE CRD POTENTIAL AT THE GALENA SILVER COPPER PROJECT

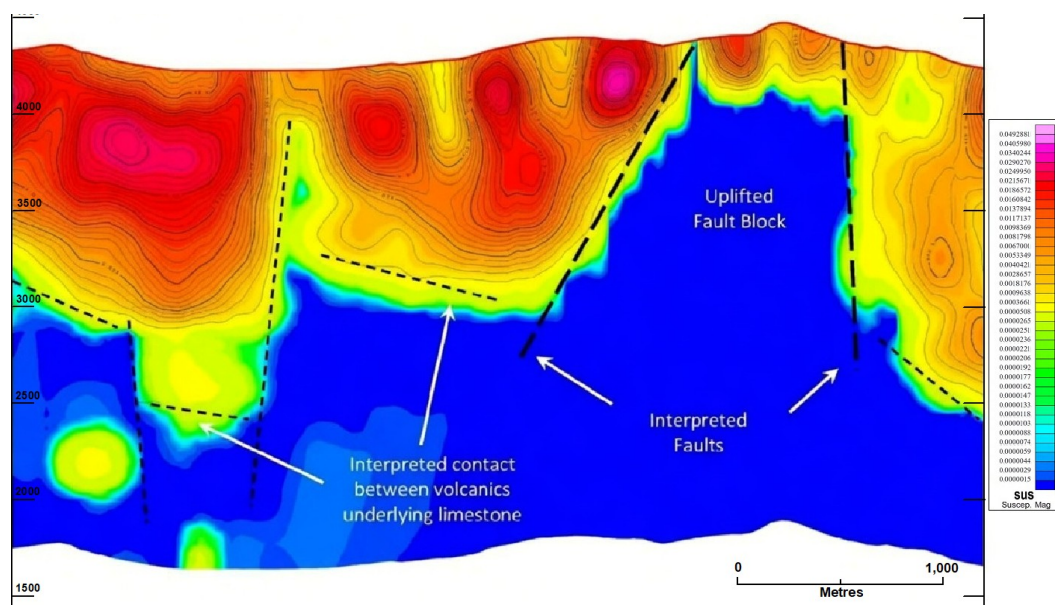

Proven Team: Track record of acquiring, advancing and successfully exiting silver and copper projects.

Tier-One Infrastructure and Access: Galena is approximately 1.5 hours by major highway from Colt Silver's regional exploration office in Juliaca. Located above the tree line, the project benefits from established road access, an active railway line crossing the property, power and water on the property.

Targeting a CRD: Colt believes Galena has the potential to host a significant, high-grade silver copper CRD within the Ayabaca limestone beneath the Tacaza volcanic's.

Near-Term Drill-Discovery Catalyst: Colt has collected over 3,000 rock and soil samples, integrating them with geologic mapping and the gravity and ground magnetic surveys completed in 2026. These data sets have delineated near-surface CRD targets exhibiting geological and geochemical signatures comparable to those of the historic Santa Barbara mine and Berenguela project along the Santa Lucia district's CRD trend.

Priority Drill Target Area: Cross-section of the inverted magnetic susceptibility in the historical Chaparro & Gaspar galena mines area with uplifted limestones (blue) bounded by volcanic rocks (yellow/magenta).

Initial drilling will test the historical Chaparro and Gaspar mines in the Gris Zone and the historical Santa Rosa mine in the Rosa zone.

No drilling has been carried out within the Galena claims area.
